

SOLIDRULES

Information management and business process automation

SolidRules enhances enterprise information management by integrating PDM and PLM to improve data sharing and operational efficiency. It automates the creation of documents and product configurations, simplifying complex processes and ensuring consistency across the organization.

Designed for modern companies, SolidRules integrates seamlessly with your existing systems, optimizing data management and enabling effective collaboration between teams. The result is a more agile workflow and higher quality final products.

Why choose SolidRules

Centralized information management

SolidRules allows you to centralize all company information into a single integrated system, facilitating data access and sharing. This improves transparency and collaboration between departments (sales, customer care, maintenance, administration), reducing information silos and increasing operational efficiency.

Automated document creation

SolidRules automates the generation of complex documents such as bills of materials, technical sheets, and manuals, ensuring they are always up-to-date and aligned with company standards. This reduces the time needed for documentation preparation and minimizes the risk of errors.

Advanced product configuration

With SolidRules, product configuration becomes simple and accurate. Rule-based automation enables efficient management of product variants and customizations, ensuring that each configuration meets both technical and commercial requirements.

Integration with existing PDM and PLM systems

SolidRules integrates fully with your current PDM and PLM systems, improving product lifecycle management and ensuring that all information is aligned and easily accessible. This enables optimal product data management and ensures a continuous workflow across development and production phases.

SolidRules solutions are ready-to-use, developed in collaboration with customers, and designed to cover all the needs of companies in the manufacturing sector.

Incentro PLM

An advanced product data management system that organizes and centralizes all technical and documentation information, enabling secure access and sharing among teams.

Incentro PDM

An advanced product data management system that organizes and centralizes all technical and documentation information, enabling secure access and sharing among teams.

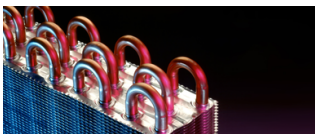

Product Configurator

A powerful tool for quick and accurate configuration of product variants, enabling personalized offers based on customer-specific requirements while maintaining consistency and quality.

Technical and Commercial Document Configurator

Dedicated software for the automated creation of technical and commercial documents, ensuring they are always up-to-date, compliant with regulations, and tailored to each project's specifications.

Heat Exchanger Configurator

A specialized module for configuring heat exchangers, enabling the design of optimized thermal solutions based on customer needs and specific operating conditions.

Layout Configurator

An advanced solution for configuring industrial layouts, supporting the design and organization of production spaces, improving efficiency, and reducing installation times.

Spare Parts Management

A module for complete spare parts management, ensuring optimal traceability and quick availability of replacement parts, minimizing downtime and improving customer service.

SolidRules Desk: CRM – Ticketing

An integrated CRM and ticketing platform that enables effective customer relationship management and responsive post-sales support, improving customer satisfaction and loyalty.
